BioBurst

Simple to use. Reliable in the field. Built for professionals.

BioBurst is a high-performance biological treatment developed specifically for wastewater treatment plants and industrial waste systems. Designed to simplify operations and enhance breakdown efficiency, BioBurst activates overnight into a powerful solution that supports smoother plant performance and cleaner processing.

BioBurst is easy to prepare and apply, delivering consistent results across a wide range of plant environments. From lift stations to digesters, BioBurst helps optimize the biological process where it matters most.

**We manufacture this product in full compliance with current Good Manufacturing Practice (cGMP) standards.*

Directions

The exact dosage may vary depending on the specifics of your system. As a general guideline, use between 1 and 3-ppm, with 2-ppm serving as a middle-ground for bulk powder applications. For best results, add 1 scoop every 24–48 hours.

Storage

Store in a dry, low-humidity environment.

Disposal

Transfer to a suitable container and arrange for collection by specialized disposal company. Recovery operations of the packaging are not applicable.
