

Liquid Deodorizers

STF

Many operators might not recall that Safe-T-Fresh was the pioneer in creating the first environmentally-safe deodorizer for the portable sanitation industry back in 1970. Even then, Satellite recognized the importance of environmental responsibility for future generations. Today, Safe-T-Fresh has been reformulated with cutting-edge ingredients to combat odors effectively. Through extensive research, testing, and field observation, we've developed a deodorizer that transforms odor molecules instead of merely masking them. This groundbreaking advancement in molecular technology maintains our commitment to environmental safety while providing superior odor control. Available in various concentrations, Safe-T-Fresh offers the flexibility to choose the best solution for your specific needs.

Superior Odor Control
Environmentally Safe
Non-Formaldehyde
Deep-Blue Dye
